

Solution Requirements

Date	19 July 2026
Team ID	XXXXXX
Project Name	Credit Card Approval Prediction
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Analysts log in with a secure email and password before accessing the tool.	High
2	Authorization levels	Roles include Credit Analyst, Compliance Officer, and Admin, each with defined access.	High
3	External interfaces	Connects to IBM Watson Machine Learning for hosting and running the prediction model.	High

4	Transactions processing	Applicant data is submitted and instantly scored by the trained ML model.	High
5	Reporting	System shows an instant approval or rejection result with a summary view.	Medium
6	Business rules, etc.	Applicants with past-due payment status are automatically flagged as high-risk.	High
7	Compliance to laws or regulations	Applicant data is handled per standard data privacy and banking norms.	Medium
8	<i>Other</i>	Compliance officers can batch-upload applicant records for bulk screening.	Medium

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria

1	Performance & Speed	Model returns an approval or rejection result within 2 seconds.	Response time under 2 seconds
2	Scalability	Cloud hosting lets the system handle rising applicant volumes smoothly.	Supports 5,000 concurrent requests
3	Security & Data Privacy	Applicant financial data is encrypted in storage and during transfer.	AES-256 encryption
4	Reliability & Availability	Cloud deployment keeps the prediction service consistently available.	99.5% uptime per month
5	Usability & Accessibility	Simple web form lets analysts and customers enter details easily.	Usable on desktop and mobile
6	<i>Other</i>	Model can be retrained as new applicant data becomes available.	Retrained every 6 months
