

Coding & Solution

Date	19 July 2026
Team ID	xxxxxx
Project Name	Credit Card Approval Prediction
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/Poojithamenon06/Credit_Card_Approval_Prediction
Programming Language(s)	Python, HTML, CSS, JavaScript
Framework(s) Used	Flask, Scikit-learn, XGBoost
Key Features Implemented	Data preprocessing, Multiple ML models, Best model selection, Flask web application, Real-time credit card approval prediction
Pending / Incomplete Features	Batch prediction and user authentication (Future Enhancement)
Setup / Run Instructions	Install dependencies run app.py, open the Flask application in a web browser, enter applicant details, view the prediction result.

Code Quality Checklist

S.N o	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The solution automates the credit card approval process using machine learning models trained on historical applicant data. The best-performing model is integrated into a Flask web application to provide fast, accurate, and real-time approval predictions. The project follows a modular architecture with separate components for preprocessing, model training, prediction, and deployment, ensuring maintainability and scalability.
