Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	No
6	Deployed application URL (if hosted)	yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

credit_card_approval_app/	
app.py	- Flask backend (routes, model loading, prediction logic)
model.pkl	- Trained Logistic Regression model
scaler.pkl	- StandardScaler fitted on training data
encoders.pkl	- LabelEncoders for categorical fields
templates/	
home.html	- Landing page
index.html	- Applicant details input form
result.html	- Prediction result page
static/	
style.css	- Styling for all pages
requirements.txt	- Python dependencies
README.md	- Setup and run instructions

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	https://credit-card-approval-prediction-fisx.onrender.com
Login Credentials (Demo)	Not required – open access for demo (no login implemented)
Platform / Hosting Provider	Render
Repository Link	https://github.com/Poojithamenon06/Credit_Card_Approval_Prediction
Demo Video Link	

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites: Anaconda (Python 3.x), PyCharm (or any IDE), pip packages: numpy, pandas, scikit-learn, flask Step 1: Clone the repository: <code>git clone https://github.com/Poojithamenon06/Credit_Card_Approval_Prediction</code> Step 2: Open the project folder in PyCharm (or your preferred IDE) Step 3: Install dependencies: <code>pip install -r requirements.txt</code> Step 4: Confirm model.pkl, scaler.pkl, and encoders.pkl are present in the project root Step 5: Run the application: <code>python app.py</code> Step 6: Open a browser and go to <code>http://127.0.0.1:5000</code>
--

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Model relies only on demographic data (no prior credit history for new applicants)	Documented as a dataset limitation; acceptable for project scope
2	scikit-learn version mismatch warning between training and runtime environments	Non-blocking; resolved by pinning <code>scikit-learn==1.5.1</code> in requirements.txt
3
